

BASIC TACTICAL TRAINER

BASIC TACTICAL TRAINER

Basic Tactical Trainer is an application designed to maximize tactical training for ground military operations. Additionally, it serves as an interactive learning platform specifically tailored for military students seeking to understand, master, and practice military tactical concepts.

SUPPORTED BY THE FOLLOWING FEATURES

Database Module:

Effortlessly enter data pertaining to Indonesian Army ground equipment, essential for foundational tactical training. The module allows seamless additions according to the user's specific requirements.

Plotting Module:

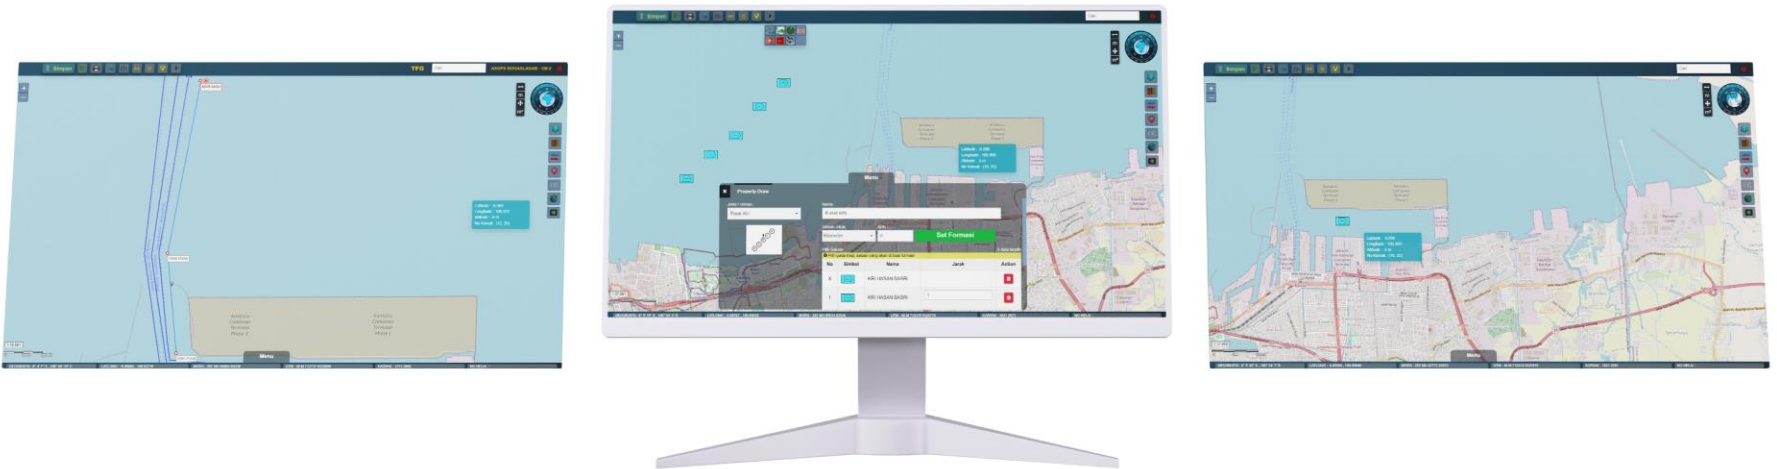

Facilitating detailed movement representation, the module expertly plots ground equipment, units, routes, and measures distances. It also enables the precision adjustment of formations through the plotting of points, polygons, lines, circles, DSA, DP, and more.

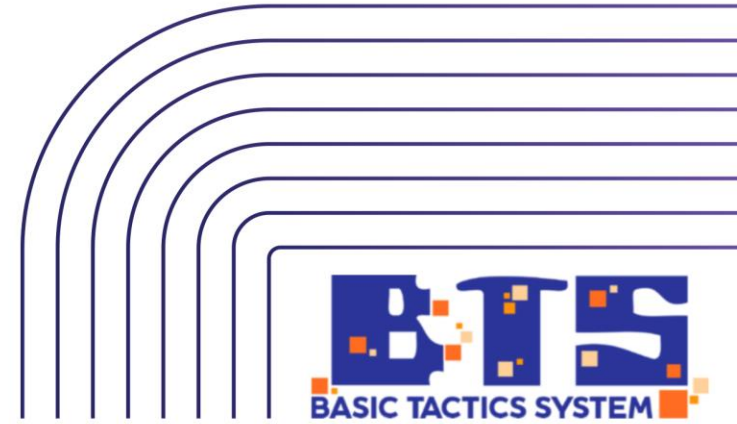

Tactical Training Module:

Immerse in a 2-Dimensional (map) simulation of movement using scenarios derived from plotting. This module harmonizes seamlessly with the stored database of ground equipment, ensuring alignment with real-world situations.

3D Visualization Module:

Step into a vivid 3D simulation showcasing movement dynamics and battle scenarios. The module vividly visualizes fundamental movements crucial for ground operations. Training with this module offers a lifelike visualization mirroring actual field situations.
