# WARGAME SCENARIO CREATOR SOFTWARE

# SUMMARY

The Military Decision Making Process (MDMP) flow process is visualized through the use of a web-based information system which is equipped with an equipment database and telegram telecommunication facilities as well as a web-based application for sending messages through it.

## FEATURES / FUNCTION

Developing a model to simulate the flow of documents during the military decision making process

The system is equipped with a defense equipment database, so that the process of filling in the information for the Military Decision Making Process can be made more efficient

The apparatus is provided with a telegram/radiogram that can be used to send messages during the implementation of exercises

Coordinate between the teams in the unit in order to improve teamwork.
