Innov Digi

3D-Simulacid-Warfare

3D Tactical Simulation Software Suites

FEATURES / FUNCTION

1
- It simulates the tactical actions of ground operations in a range of different types of tactical ground operations on a real-world battlefield.

2
- There are various types of tactical training equipment that can be included in this tactical training equipment, such as combat visualization (various types of missile defense equipment) and equipment directly related to the unit's duties.

3
- In order to prepare for a real combat situation, students should be trained with a tactical demonstration visualization that is similar to the situation in a real combat. By doing this, the students' basic tactical abilities will be honed.

4
- It is necessary to train coordination between task units in a 3-Dimensional format

FEATURES / FUNCTION

Choose the best scenario from the list and load it

Using 3D graphics to display or simulate movement

In a 3D environment, display and simulate attacks and defenses

The ability to display / simulate the trajectory of weapons

Change the weather if you want

Displaying / simulating daytime and nighttime images

Create a custom 3D object (Building, Road, Vehicle, Men, etc.) and add it to the scene
