- Indoor Maps

Access by Wifi

Indoor Maps

Access Login By Username Password

If the user does not bring a user card, it is still possible to return the book by logging in using the username & password

User Information Detail

After the user has successfully logged in and entered the system, the user can view detailed user information on the application

Book List

Displays data for all books in the cart, data displayed with book code, book title and year of publication. When the book has been removed from the basket, the data in the book list will automatically disappear

Book Detail Information

The system can display more detailed information such as classification, author, isbn etc

Data Filter

Filter the information in the book list to make it easier for you to search for the collections in the basket

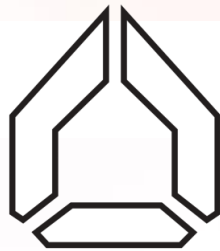

Integration

Integrate applications with the Library Management System using web service methods (JSON, XML).

Indoor Maps

The system will display the location of the bookshelf, this feature makes it easier for library staff to store books that have just been returned to be stored back in the Bookshelf
