**ACADEMIC INFORMATION**

SYSTEM

AcademiSys

This system was created to facilitate educational administration activities, all of which are managed online. Some examples of activities that are administrative in nature are new student admissions, preparation of educational schedules, student records, lecturer data recording, attendance, employees, students and filling in grades.

Academic Information Management System

Databases & Apps

Admin System

Technical Specifications

Front Office / Student & Teachers Module

- students are able to re-register online
- can verify the completeness of student files
- student attendance

Data Entry Module

- recording of education schedule
- teacher data recording
- recording student assessment data
- Assessment of the lecturers online
- evaluation sheet questionnaire
- data integration

Administration Module

SYSTEM ADVANTAGES

Designed to manage all existing information in an integrated manner, so that the available data is always updated (up to date) in real time

Minimize data duplication encountered in manual systems

Media of communication between students and lecturers

Serves as an information center, among others:
- New student Admission
- Education schedule
- Evaluation
- Education Evaluation
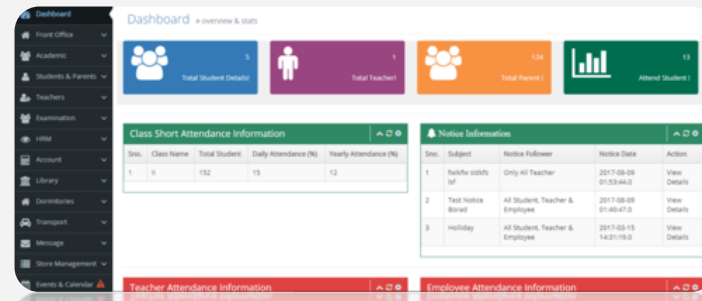

FEATURE

Benefits of Academic Information Systems

Make it easier for students to obtain information without the need to come to the administration section at the education and training center which is often long because they have to queue, etc.
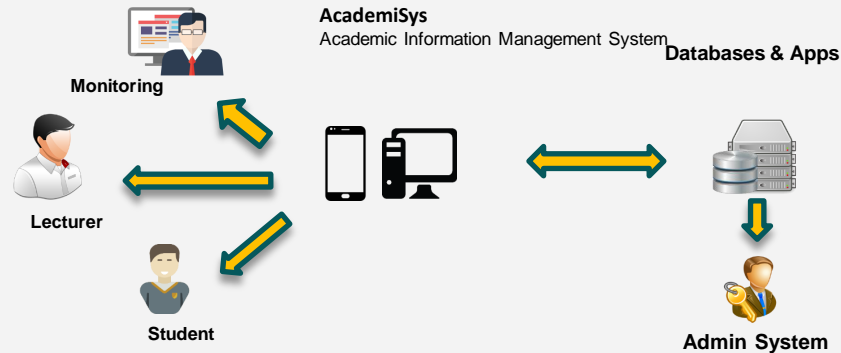

The administration of the education and training center is also facilitated by this system because it reduces the burden of interacting with students who need data. The administration department can focus its time on data input and data checking.

The data is stored in a structured manner with a database stored on a computer.

More effective student administration data processing by using applications that can support staffing processes and processes

This system was created to facilitate educational administration activities, all of which are managed online. Some examples of activities that are administrative in nature are new student admissions, preparation of educational schedules, student records, lecturer data recording, attendance, employees, students and filling in grades.

- students are able to re-register online
