**VOOGETIA**

Streaming Server System
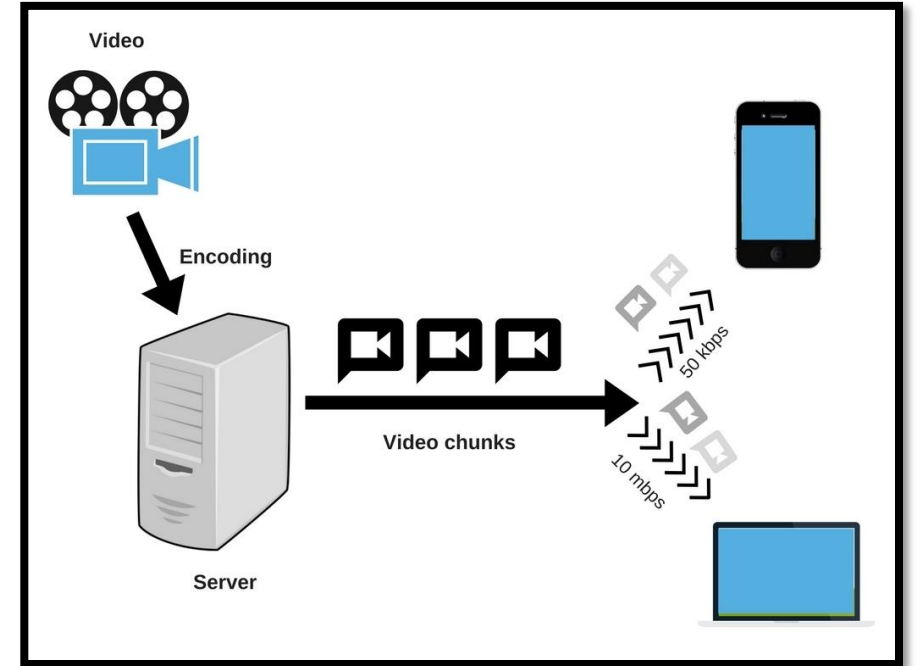

Audio Streaming

The principle is the same — users can listen to music without downloading it. Everything is simple.

Video Demand Streaming (VOD)

This one makes it possible for users to watch TV series and movies without downloading them on devices. However, a distinctive feature is that they can pause content, resume, and rewind it. As a rule, users have to pay for a subscription to have access to the content.

- Stream Video stored in database (like Youtube)
- Streaming can be done simultaneously by many users (Multicast)
- Accommodates major Video Streaming protocols such as UDP and MMS
